community

Foster a Culture of Engagement and Connection

Community, an integrated part of the Paylocity platform, streamlines communication and fosters a culture of engagement not possible with broadcast emails, antiquated intranets, or break room bulletin boards. It empowers you to engage all employees — even those that are remote, on-the-go, or don't have corporate email with our robust mobile app.

> "Community is our total communication package. It allows us to easily communicate with employees, but also allows them to communicate with each other. It's perfect for us!"
>
> – Director of HR, ABC Home and Commercial

Why Employees Love Community

Feel Appreciated and Give Recognition to Peers
View accolades for your achievements and easily recognize colleagues. The social feed makes it fun and easy to congratulate teammates with comments and emojis.

Connect with Profiles and Discussion Groups
Learn about your colleagues with user profiles and connect on projects, interests, and initiatives cross departmentally with discussion groups.

Simplify Communication with Team Groups
Streamline collaboration between supervisors and teammates through automatically-created team groups. You can even welcome new coworkers with fun icebreaker questions on their first day.

Work Together via File Sharing and Chat
Simplify collaboration on complex projects and use chat for quick team communication — even for deskless team members or those without company email or equipment.

How Community Helps You

Optimize "Broadcast" Communications
A company feed streamlines announcements into a single location that's accessible to all employees. Use out-of-the-box templates, such as tax season reminders and instant pay.

Understand Your Reach
A convenient dashboard makes it easy to schedule, manage, send, and track engagement with announcements.

Support Employees at Scale
With Ask an Expert groups, employees can pose questions to designated group experts who can manage questions from an intuitive dashboard.

Communicate More Effectively
Get a kickstart on announcements by entering a prompt into AI Assist. Ensure your message lands by calibrating the tone and even translating into other languages.
